

eCIP: Enhancing your *eCabinet* Productivity

Introducing *eCIP*, the *eCabinet* Interface Program

eCIP facilitates indexing of documents sent to the *eCabinet* by any of the *eCabinet*'s supported document sources, including Network Scanner, e-Mail, Fax, PC Capture, Paperless Printer. Unlike front-end systems, *eCIP* leverages the strengths of the *eCabinet*.

Documents are easily indexed using *eCIP*'s split screen document/index view and moved to the appropriate folder and index key search values are quickly entered. Index from any PC or thin client on the LAN, WAN, Internet!

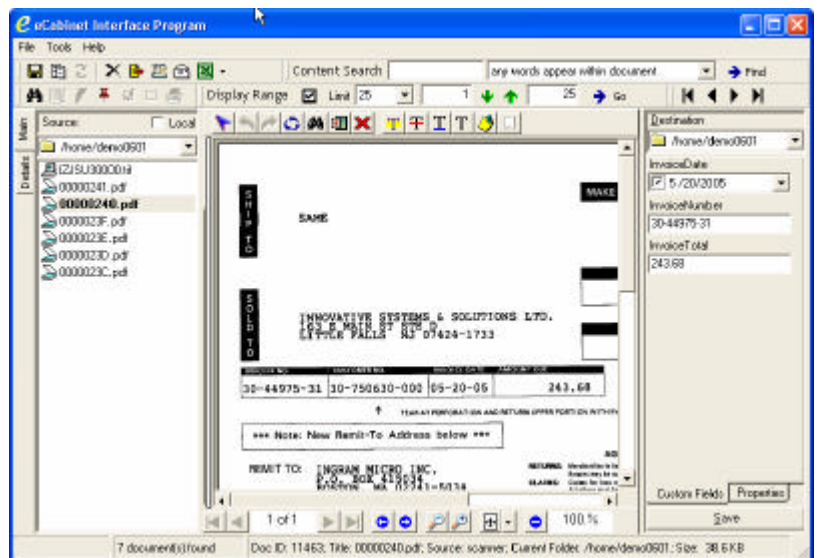

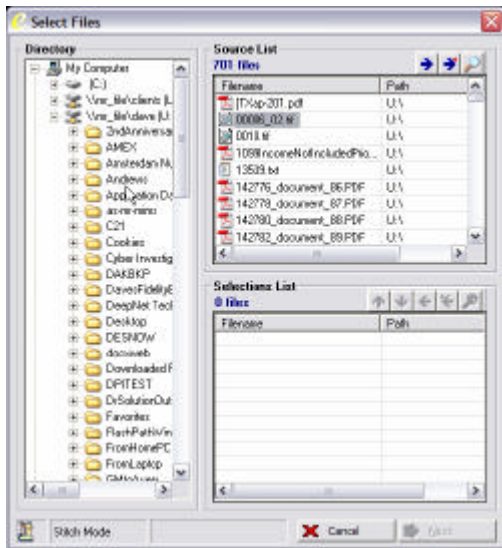

HIPAA Compliance:

Our Document Tracking and Audit (DTA) add-on module, combined with the security enforced by the UNT, assists in overall HIPAA Compliance. Adhering to HIPAA regulatory requirements, all user activity is audited and logged. DTA tracks who and when documents are opened, closed, moved (if the user has the rights), deleted (if the user has the rights), and changes to any of the Custom Fields (index info), or any of the document's properties. DTA keeps 'before' and 'after' values of any changed data as part of its comprehensive auditing.

eCIP: Enhancing your eCabinet Productivity

Optional PDF Tools Module:

- Stitch Documents from varied sources together, without Adobe's Acrobat:
 - Local / LAN to eCabinet
